The Ninth Biennial  
 Johns Hopkins Breast Cancer Conference:  
 A Multidisciplinary  
 Perspective  
 March 16-17, 2018  
 The Hotel at Arundel Preserve  
 Hanover, Maryland  
 Presented by  
 Johns Hopkins Breast Cancer  
 Johns Hopkins Kimmel Cancer Center

This activity has been approved for  
 AMA PRA Category 1 Credits™

## Description

Since our last conference, the diagnosis, treatment and overall care needs of breast cancer patients have become more complex. This is due to innovative improvements in therapies, better screening processes, and multidisciplinary care models developing across the US. The indications for axillary node dissection continue to change. Immunotherapy with immune checkpoint blockade is achieving startling results in some patients. There are more options for molecular profiling of tumors, as well as more choices about systemic therapies and radiation therapy. There are more and more long term survivors who require intelligent management by primary care providers to maintain a high quality of life. Come listen, learn and actively participate in discussions regarding these topics and more.

## Who Should Attend

This activity is intended for radiologists, pathologists, surgeons, medical and radiation oncologists, nurses, nurse practitioners, physician assistants and other professionals involved in prevention, screening, diagnosis and management of breast cancer.
