Third Annual

LYME DISEASE TOPICS at JOHNS HOPKINS

Friday, June 14, 2019 • 1:00 – 5:30 pm

DESCRIPTION

Lyme Disease affects over 300,000 new patients every year who are clustered in and around the major metropolitan regions of the Mid-Atlantic and Northeastern United States. Timely diagnosis of acute Lyme Disease depends on the accurate identification of the early erythema migrans skin lesion. Untreated, Lyme Disease can progress to disseminated infection involving the nervous system, heart, and joints.

Antibiotic treatment of Lyme Disease is effective in resolving the objective manifestations of infection, however, a subset of patients develop persistent symptoms called Post-Treatment Lyme Disease Syndrome (PTLDS). Experts from Johns Hopkins have carefully described the patient symptoms, physical findings and laboratory finding in a well documented case series of patients with PTLDS.

The diagnosis of all manifestations of Lyme Disease and PTLDS in the clinical practice of medicine is challenging and this course seeks to provide education to healthcare practitioners who may see patients with the spectrum of illness associated with Lyme Disease and PTLDS.

WHO SHOULD ATTEND

This activity is intended for General Practice, Family Practice, Rheumatology, Infectious Disease and Family Practice Nurse Practitioner.

Location: Mt. Washington Conference Center
5801 Smith Avenue • Baltimore, Maryland 21209

Phone: (410) 735-7674
