JOHNS HOPKINS
MEDICINE

47th Annual Pediatric Trends

May 11-14, 2021

INTERNET LIVE CONFERENCE

Description

Pediatric medicine is evolving on a daily basis and it can be difficult for a general pediatric practitioner to remain up-to-date on new standards of care, therapies, and medications. The goal of this course is to fulfill the need in the practicing pediatric community to increase and improve competence in the field of pediatric medicine and to integrate best practices based on evidence-based medicine and current research. Dr. Ngo reached out to Division leaders to discuss potential topics related to their subspecialty that may be of particular interest to the general pediatric practitioner. This will assist in closing the gap between community and academic medicine. Reasons to refer to a tertiary care center will also be discussed.

Who Should Attend

This activity is intended for pediatricians, general practitioners, nurse practitioners, PAs, pediatric subspecialists, pediatric residents, pediatric subspecialty fellows, family practitioners and other allied health professionals interested in the care of infants, children and adolescents.

Objectives

After attending this activity, the participant will demonstrate the ability to:

- Describe the management of bronchopulmonary dysplasia in the outpatient setting.
- Recognize common presentations and emerging therapies in the management of pediatric neuromuscular disorders.
- Discuss common sports injuries.
- Explain the epidemiology, etiology, and treatment of pediatric burns.
- Discuss if maternal HIV seropositivity is a contraindication to breastfeeding.
- Identify patients with hemolytic anemia through clinical presentation and laboratory data.
- Describe depression treatment and suicide prevention in youth.
- Discuss treatment and management options for patients with constipation.
- Recognize community-acquired pneumonia and understand treatment options.
- Discuss healthcare (medical and psychological) for LGBTQ youth.
- Explain the evaluation and management of myocarditis and pericarditis in children.
