Radiofrequency Ablation (RFA) of Benign Thyroid Nodules

Spring 2021 Course

Friday, April 9, 2021

DESCRIPTION

Many advances have been made in diagnostic modalities and treatment options for thyroid and parathyroid disease. Management concepts in these tumors are in constant flux medically and surgically. There is a large amount of information published, including guidelines, on these topics which can make it difficult for the practicing physician to stay current with new developments. This course will provide up-to-date information regarding the application of radiofrequency ablation technology in the management of benign thyroid nodules.

WHO SHOULD ATTEND

This activity is intended for endocrinologists, general surgeons, radiologists and otolaryngologists.

OBJECTIVES

After attending this activity, the learner will demonstrate the ability to:

- Summarize the risks and potential benefits of RFA for thyroid nodules.
- Describe the method by which RFA functions.
- Identify the appropriate settings and methods for safe RFA application.
- Discuss the indications and contraindications of RFA for benign thyroid nodules.

The Johns Hopkins School of Medicine takes responsibility for the content quality and scientific integrity of this CME activity.

This activity has been approved for *AMA PRA Category 1 Credits™*.

General Information

8:00 a.m. – 12:00 p.m.
